### *Extruded Metals Installs Granco Clark Saw*

*Belding, Michigan* — Extruded Metals, Inc., has installed a Granco Clark ECS-2406 sawing system at its plant in Belding, Michigan.

With its excellent cutting tolerances, the Granco Clark extrusion cutoff saw will provide Extruded Metals with the ability to saw-cut all sizes of brass products to a quality finish and sizing. The company supplies brass manufacturers with several alloys of high-quality brass rod and bar for a wide range of products, such as industrial fittings and valves, electrical equipment, and faucet parts.

*Founded in 1947, Granco Clark began manufacturing billet furnaces and has evolved into a global, single-source supplier and leading equipment manufacturer to the aluminum extrusion industry. Quality is a key component in every extrusion system the ISO-9001-certified company fabricates—from billet log furnaces and log shears to age ovens and stacking equipment.*
