

# Cold Log and Billet Processing

## *Cold Log and Billet Cutting, Stacking and Banding*

**GRANCO CLARK** Log and Billet Saw, Auto Bander and Robotic Stacker are game-changers for manufacturing companies that produce logs and billets. The system automates the entire process, from cutting the logs to stacking the billets, and banding them for transport. With this system in place, manufacturers can increase their productivity, reduce their labor costs, and improve the overall efficiency of their operations.

If you're looking for a solution to streamline your log and billet cutting process, the Log and Billet Saw, Auto Bander and Robotic Stacker are definitely worth considering.

- Rugged construction
- Fully enclosed saw blade
- Compensation and two-piece billet cutting
- Servo controlled measurement
- Integrated with loading and unloading tables
- Square cuts
- Longevity
- Dependability
- Increased safety for operator
- Low noise level
- Maximum usage of raw materials
- Reduced complexity of the equipment, cutting down on maintenance requirements
- Provides the information for accurate cut lengths
- Complete sawing system designed for ease of use and precise control
- Delivers a clean-cut, sharp-edged billet
- Robotic Stacking of Billets of All Diameters
- Automatic Fixture Accommodates All Bundle Configurations
- Band Logs and Billets
- Offload Bundles without Process Interruption
