## PROBE RODS AND CONNECTORS.

### ATTENTION!

Over the last years, customers have requested a push on style probe connector. Granco Clark has listened and has designed the style customers want!

1. The new style probe connector features a push on style fitting and a two-piece compression style wire connector.
2. The new style probe rod no longer will contain a threaded rod end. Instead, it will be a tapered end with a smooth finish and a detent groove for the probe connector to lock on.
3. We are also offering this as a premade pig tail and will contain the new style push on connectors, thermocouple wire and the female connector jack.
4. Along with the new design the premade pigtails will contain heat shrink protection along with silicon tubing around the thermocouple wire for added protection. (See photo's below)
5. New part number as listed.
  - Red push on connector. Part number 599010000012.
  - Yellow push on connector. Part number 599010000013.
  - Premade pig tail. Part number 47035.09.
6. Moving forward Granco Clark will not offer the Threaded style probe rods. The new style push connector will work on the threaded end and cause no issues to temperature reading or to tightness on the rod end.
7. Please reach out to our parts department and order the new style that offers a more convenient way to remove the probe rods for maintenance.
